Staff_Member

PK	StaffID	int
	FirstName	varchar
	LastName	varchar
	StaffTitle	varchar
	StaffPhone#	char

Account

PK	AccountNum	int
FK	**AccountManagerStaffID**	int
	CompanyName	varchar
	CompanyContactFirstName	varchar
	CompanyContactPhone#	char

Each Account has a staff member that manages the account, a company associated with the account, and any projects associated with the account.

Because the relationship between Projects and Staff is many to many, an intersection table must be created in the database design

Projects&Staff

PK	FK	ProjectID	int
PK	FK	StaffID	int

Project

PK	ProjectID	int
FK	**AccountNum**	Int
	ProjectManagerName	varchar
	ProjectManagerPhone#	char
	StartDate	Date
	EndDate	Date

ProjectFee

PK	FeeID	int
PK	FK	**ProjectID**	int

Each Project must have a fee, and must have one or more staff members working on it. The Fee entity and the intersection table for Projects&Staff are both weak entities dependent on the Project (and Staff for Projects&Staff) entity.
